

amalian high potency skincare

Skin & Vision Technologies AG is proud to announce the launch of its amalian high potency skincare range scheduled for October 2012. This professional skincare line was developed by a multidisciplinary team of experts in cosmetic science, chemistry and dermatology, with the aim of meeting the demands of today's aesthetic medicine consumers. The company believes that healthy looking skin is of paramount importance to achieving excellent aesthetic results. This was Skin & Vision's motivation for developing an advanced skincare range for aesthetic professionals who care about their patients' skin condition.

Countering the signs of ageing

The amalian high potency skincare products have been developed to help counter the signs of ageing and to care for the skin. The high potency anti-ageing range targets signs of premature ageing and slows the ageing process in mature skin. amalian skincare is exclusively formulated with ingredients of natural origin and is free of synthetic fragrances, parabens and mineral oils. The products are best suited for sensitive skin and allergic patients. The packaging of the skincare range is equipped with an efficient,

easy-to-use airless pump, which ensures a tight barrier against oxidation.

The amalian skincare line is based on a powerful hyaluron-ecithin complex. Lecithin, an outstanding natural emulsifier from botanical origin, is a well-known and scientifically proven skin penetration enhancer. Hyaluronic acid is nature's most powerful moisturiser. amalian skincare formulations combine the basic hyaluron-ecithin complex with high potency natural key ingredients to moisturise, nourish and rejuvenate the skin. The superior efficacy of the complex, hyaluron-ecithin, is clearly visible through an improvement in the overall skin condition only a few weeks after starting a daily skincare regimen.

The amalian anti-ageing face care range comprises:

- Cleansing milk: a gentle cleanser formulated with jojoba oil, removes impurities, excess oils and make-up without dehydrating the skin
- Balanced toner: enriched with niacinamide and a blend of botanical extracts, such as *centella asiatica* and papaya; designed to help exfoliate dead skin cells, calm and refresh the skin
- Face fluid: this light anti-ageing fluid is balanced with a blend of vitamins and moisturisers formulated to provide protection against the extrinsic signs of ageing
- Face cream: this powerful hyaluron-ecithin cream is enriched with high-potency natural nutrients, antioxidants and vitamins designed to help counter the signs of ageing skin
- High-potency lifting serum: this oil-free fluid combines a high hyaluronic acid content with *centella asiatica* extract and pro-vitamin B5, designed to nourish and plump up the skin with moisture

- Night regenerating lifting cream: the basic hyaluron-ecithin complex is enriched with retinal to boost collagen synthesis. It improves skin texture, tone and smoothes fine lines
 - Eye cream: outstanding formulation containing selected high-potency phytochemicals designed to stimulate the rejuvenation of the eye area.
- The amalian high potency body care range includes:
- Body Lifting: a balanced lotion, including natural nutrients, antioxidant moisturisers and vitamins designed for daily care of skin's hydrobalance
 - Body Repair: a lotion enriched with pro-vitamin A, targets overnight regeneration of body's skin areas, which need intensive care
 - Hand Repair Lotion: an oil-free blend formulated to plump up skin with moisture, giving hands an extraordinary silky feel. Ideal to repair environmentally damaged skin
 - Foot Repair: emollient balm heavily enriched with coriander

oil to boost the overnight regeneration of dry skin.

For hyperpigmentation conditions, we offer the amalian high-potency brightening fluid. It is a powerful fluid blend, enriched with botanical extracts of bearberry and *Glycyrrhiza glabra* root designed to lighten and prevent hyperpigmentation.

Cooling fluid

The amalian skincare line is completed with a set of cooling fluids, masks and strips, specifically designed to address redness and swelling immediately after minimally-invasive aesthetic procedures. The cooling fluid is formulated with a blend of Asiatic botanical extracts with well-known anti-inflammatory and antipyretic features. Masks soaked with the amalian cooling fluid effectively reduce redness and swelling, within a short time frame. This is an excellent additional tool for physicians when closing aesthetic procedures. The extra patient care helps to ensure patients are satisfied when leaving the clinic.

Make your lashes amazing with amalian

The styling of eyelashes has been of concern in facial beauty as far back as ancient Egypt. Eyelashes grow from the eyelids, protecting and framing the eyes. Long, thick and curly eyelashes enhance the natural beauty of the eyes. amalian LASHES is a brand new gel for the natural enhancement of eyelashes. This novel product is developed, manufactured and marketed by Skin & Vision Technologies AG.

amalian LASHES is a novel proprietary formulation (patent pending) based on an innovative technology designed for the revitalisation of eyelashes. The highly biocompatible solution is enriched with a sugar complex, which has an encapsulated active ingredient, designed to nourish and boost the eyelashes. The eyelash gel is formulated without preservatives and alcohol, therefore being very well tolerated.

The safety and efficacy of amalian LASHES has been clinically reviewed by dermatologists and ophthalmologists. The topical product is non-allergenic, and no cases of ocular irritation, iris or eyelid hyperpigmentation have been reported.

amalian LASHES is available in a user-friendly dispenser. The topical gel should be applied once daily like an eye-liner, preferably in the evening. The amalian LASHES gel cares for visible, measurable natural enhancement of eyelashes

in a few weeks' time. amalian LASHES enhances the eyes by making the lashes look longer, darker and thicker, promoting overall facial beauty.

amalian LASHES is an exclusive physician-dispensed topical product and is not available in retail stores.

Further information

The amalian high potency skincare range is manufactured by Skin & Vision Technologies AG. amalian professional skincare is exclusively marketed to physicians and is not available in retail stores.
